AKASH

Full Stack Developer
akashdevadiga3553@gmail.com | +91 6362589640 | Bangalore, India

PROFESSIONAL SUMMARY

Full Stack Developer with 2.5 years of experience building and shipping production web, mobile, and desktop applications across streaming, broadcast media, and device-control platforms. Deep hands-on expertise in React.js, React Native, Node.js, Python, and real-time WebSocket/WebRTC systems, with practical AWS experience (EC2, S3, Lambda) from a self-built video-to-HLS conversion pipeline, plus Docker for cloud-hosted deployments. Experienced in implementing authentication, including Azure Authentication. Delivered a multi-app remote-control ecosystem spanning Android TV, mobile, and web; passed rigorous OWASP ZAP security audits with zero critical vulnerabilities; and built low-bandwidth WebRTC video conferencing that holds up under 512 kbps.

TECHNICAL SKILLS

Frontend	React.js, React Native, Redux / Redux-Saga, JavaScript (ES6+), HTML5, CSS3
Backend	Node.js, Python, REST APIs, WebSocket, WebRTC
Cloud & DevOps	AWS (EC2, S3, Lambda), Docker, Git, GitLab CI/CD, Nginx
Databases	MySQL, MongoDB, Redis
Desktop & TV	Electron.js, Android TV, HLS.js, Shaka Player, Adaptive Bitrate Streaming
Security	Authentication (Azure Authentication), OWASP / ZAP Security Testing, Secure API Design, XSS & CSRF Hardening

PROFESSIONAL EXPERIENCE

Full Stack Developer — Riversilica Technologies Pvt Ltd

Jun 2024 – Present | Bangalore, India

- Built and shipped full-stack applications end-to-end using Node.js, React.js, and Python, owning architecture, performance, and production deployment.
- Engineered a real-time device-control ecosystem: WebSocket-driven remote control linking an Android TV application, a React Native mobile app, and a web admin console — enabling live command, stream-switching, and status sync across devices.
- Implemented authentication across web and desktop applications, including Azure Authentication for the Jiffyrec desktop app, and hardened APIs with secure access practices.
- Resolved critical Android TV playback issues (stream-switching stability, decoder state handling, UI/navigation edge cases), ensuring reliable large-screen playback across device specs.
- Designed and managed data layers across MySQL, MongoDB, and Redis for relational storage, document-based data, and high-performance caching.
- Built desktop video applications with Electron.js, integrating HLS.js and Shaka Player for high-quality playback and recording.
- Drove production releases through GitLab CI/CD and Nginx-based deployment, translating Figma designs into pixel-perfect, responsive interfaces.

PROJECTS

Soapbox — OTT Streaming Platform *React.js · Node.js · MySQL · Redis · WebSocket · Python*

- Engineered the server-side infrastructure — API services, middleware, and deployment pipelines — powering a high-availability OTT platform.
- Built a full-featured CMS using React.js and Node.js for content management, scheduling, and metadata administration.
- Developed a custom video plugin with adaptive bitrate HLS playback and cross-browser compatibility.
- Shipped a Data Analytics module tracking user engagement and content performance via Redis/MySQL aggregations.

Vinify — Full-Stack Web App *React.js · Node.js · WebRTC*

- Built a chunked, resumable large-file upload system with progress tracking for multi-GB media assets.
- Delivered WebRTC video conferencing that stays fully functional under 512 kbps of bandwidth.
- Passed all OWASP ZAP security tests with zero critical vulnerabilities, hardening APIs against XSS, CSRF, and injection attacks.

Visor — Multi-Server Management Dashboard *React.js · Redux · WebSocket · REST APIs*

- Built a real-time admin dashboard monitoring multiple servers with live status, resource usage, and health indicators.

- Implemented remote server control — start, stop, restart, configure — directly from the UI, with instant WebSocket alerts.

Jiffyrec — Video Monitoring Desktop App *Electron.js · HLS.js · Shaka Player · WebSocket · Redux*

- Built a desktop app for live video monitoring and recording with Azure Authentication and multi-protocol stream playback.
- Integrated HLS.js and Shaka Player with Redux-driven real-time state for high-quality, reliable video rendering.

OTHER PROJECTS

- **MP4-to-HLS Converter** *[Personal Project · AWS]* — cloud-based application that converts locally uploaded MP4 videos into HLS streams using AWS EC2, S3, and Lambda with a database for job tracking, giving hands-on, practical experience designing and deploying on AWS.
- **Nuzr** *[Mobile] [React Native]* — cross-platform Android app built with a reusable component architecture for seamless UI/UX and performance across device specs.
- **Controller** *[React Native]* — mobile app built for real-time WebSocket control over a connected player application, enabling remote channel/stream switching and live status feedback.
- **Android TV** *[Java]* — kiosk application for playing HLS, MPD, and SRT video streams, with robust stream-switching and playback-recovery handling.
- **PlayController** *[Webapp]* — web console for controlling multiple connected devices, acting as a middleman layer that unifies control across several applications.

CERTIFICATIONS

- Python Full Stack Developer Certification — Python, Django, HTML, CSS, JavaScript, Oracle SQL, React.js

EDUCATION

Bachelor of Commerce Jun 2019 – Nov 2022
Kuvempu University
