AKASH

Full Stack Developer | React · Node.js · Python | Real-Time Systems | LLM & RAG

akashdevadiga3553@gmail.com | +91 6362589640 | Bangalore, India

PROFESSIONAL SUMMARY

Full Stack Developer with 2.5 years of experience shipping production web, mobile and desktop applications for streaming, broadcast media and device-control platforms. Strong in React.js, React Native, Node.js and Python, with real-time WebSocket/WebRTC systems, Azure Authentication, AWS (EC2, S3, Lambda) and Docker. Delivered a multi-app remote-control ecosystem across Android TV, mobile and web; passed OWASP ZAP audits with zero critical vulnerabilities; built WebRTC video conferencing that holds up under 512 kbps. Building applied-AI skills: hands-on with LLM APIs, RAG and tool-calling agents in Node.js, and daily use of AI coding tools (Claude, ChatGPT, Cursor).

TECHNICAL SKILLS

Frontend: React.js, React Native, Redux / Redux-Saga, JavaScript (ES6+), HTML5, CSS3

Backend: Node.js, Python, REST APIs, WebSocket, WebRTC

AI / LLM: Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), LLM API integration (Groq), tool-calling agents, prompt engineering, AI-assisted development (Claude, ChatGPT, Cursor)

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Git, GitLab CI/CD, Nginx

Databases: MySQL, MongoDB, Redis

Desktop & TV: Electron.js, Android TV, HLS.js, Shaka Player, Adaptive Bitrate Streaming

Security: Azure Authentication, OWASP / ZAP Security Testing, Secure API Design, XSS & CSRF Hardening

PROFESSIONAL EXPERIENCE

Full Stack Developer — Riversilica Technologies Pvt Ltd Jun 2024 – Present | Bangalore, India

- Built and shipped full-stack applications end-to-end with Node.js, React.js and Python, owning architecture, performance and deployment.
- Engineered a real-time device-control ecosystem: WebSocket-driven remote control linking an Android TV app, a React Native mobile app and a web admin console, enabling live commands, stream switching and status sync.
- Implemented authentication across web and desktop apps, including Azure Authentication for Jiffyrec, and hardened APIs with secure access practices.
- Resolved critical Android TV playback issues (stream-switching stability, decoder state handling, navigation edge cases) for reliable playback across device specs.
- Designed MySQL, MongoDB and Redis data layers; built Electron.js desktop video apps with HLS.js and Shaka Player for playback and recording.
- Drove releases through GitLab CI/CD and Nginx deployments; turned Figma designs into responsive interfaces.

PROJECTS

Soapbox — OTT Streaming Platform *React.js · Node.js · MySQL · Redis · WebSocket · Python*

- Engineered server-side infrastructure (API services, middleware, deployment pipelines) for a high-availability OTT platform.
- Built a CMS (React.js, Node.js) and a custom adaptive-bitrate HLS video plugin; shipped a Redis/MySQL analytics module tracking engagement and content performance.

Vinify — Full-Stack Web App *React.js · Node.js · WebRTC*

- Built chunked, resumable large-file uploads with progress tracking for multi-GB media assets.
- Delivered WebRTC video conferencing that stays fully functional under 512 kbps; passed all OWASP ZAP tests with zero critical vulnerabilities, hardening APIs against XSS, CSRF and injection attacks.

Visor — Multi-Server Management Dashboard *React.js · Redux · WebSocket · REST APIs*

- Built a real-time admin dashboard showing live status, resource usage and health of multiple servers, with remote start / stop / restart / configure and instant WebSocket alerts.

Jiffyrec — Video Monitoring Desktop App *Electron.js · HLS.js · Shaka Player · WebSocket · Redux*

- Built a desktop app for live video monitoring and recording with Azure Authentication and multi-protocol stream playback, using Redux-driven real-time state.

Document Q&A Agent (RAG) — Personal Project *Node.js · Groq API · BM25*

- Built a retrieval-augmented chatbot that chunks documents, indexes them with BM25 and answers questions with cited sources.
- Implemented a tool-calling agent loop (document search, calculator, time) in which the model selects tools and the app executes them, with a step limit as a cost and safety guardrail.

OTHER PROJECTS

- **MP4-to-HLS Converter (Personal, AWS):** converts uploaded MP4s to HLS streams using EC2, S3 and Lambda, with job tracking.
- **Controller (React Native) and PlayController (Web):** real-time WebSocket control of connected players across multiple devices.
- **Android TV (Java):** kiosk app playing HLS, MPD and SRT streams with robust stream switching and recovery.
- **Nuzr (React Native):** cross-platform Android app with a reusable component architecture.

EDUCATION & CERTIFICATIONS

Python Full Stack Developer Certification — Python, Django, HTML, CSS, JavaScript, Oracle SQL, React.js

Bachelor of Commerce — Kuvempu University Jun 2019 – Nov 2022
